

## Data Sheet

**π140E/π141E/π142E**

### FEATURES

Ultra-low power consumption (1Mbps): 0.58mA/Channel

High data rate: 200Mbps

High common-mode transient immunity:

π14xx3x: 75 kV/μs typical

π14xx6x: 120 kV/μs typical

High robustness to radiated and conducted noise

Low propagation delay: 9 ns typical

Isolation voltages:

π14xx3x: AC 3000Vrms

π14xx6x: AC 5000Vrms

High ESD rating:

ESDA/JEDEC JS-001-2017

Human body model (HBM) ±8kV

Safety and regulatory approvals:

UL certificate number: E494497

3000Vrms/5000Vrms for 1 minute per UL 1577

CSA Component Acceptance Notice 5A

VDE certificate number: 40053041/40052896

DIN VDE V 0884-11:2017-01

$V_{IORM} = 565V$  peak/1200V peak

CQC certification per GB4943.1-2011

3 V to 5.5 V level translation

AEC-Q100 qualification

Wide temperature range: -40°C to 125°C

RoHS-compliant, NB SOIC-16, WB SOIC-16 and

SSOP16 package

### APPLICATIONS

General-purpose multichannel isolation

Industrial field bus isolation

Isolation Industrial automation systems

Isolated switch mode supplies

Isolated ADC, DAC

Motor control

### GENERAL DESCRIPTION

The π1xxxxx is a 2PaiSemi digital isolators product family that includes over hundreds of digital isolator products. By using matured standard semiconductor CMOS technology and 2PaiSEMI *iDivide*® technology, these isolation components provide outstanding performance characteristics and reliability superior to alternatives such as optocoupler devices and other integrated isolators.

Intelligent voltage divider technology (*iDivide*® technology) is a new generation digital isolator technology invented by 2PaiSEMI. It uses

the principle of capacitor voltage divider to transmit voltage signal directly cross the isolator capacitor without signal modulation and demodulation.

The π1xxxxx isolator data channels are independent and are available in a variety of configurations with a withstand voltage rating of 1.5 kV rms to 5.0 kV rms and the data rate from DC up to 600Mbps (see the Ordering Guide). The devices operate with the supply voltage on either side ranging from 3.0 V to 5.5 V, providing compatibility with lower voltage systems as well as enabling voltage translation functionality across the isolation barrier. The fail-safe state is available in which the outputs transition to a preset state when the input power supply is not applied.

Table 4. Absolute Maximum Ratings<sup>4</sup>

Parameter	Rating
Supply Voltages ( $V_{DD1}$ - $GND_1$ , $V_{DD2}$ - $GND_2$ )	-0.5 V ~ +7.0 V
Input Voltages ( $V_{IA}$ , $V_{IB}$ ) <sup>1</sup>	-0.5 V ~ $V_{DDx}$ + 0.5 V
Output Voltages ( $V_{OA}$ , $V_{OB}$ ) <sup>1</sup>	-0.5 V ~ $V_{DDx}$ + 0.5 V
Average Output Current per Pin <sup>2</sup> Side 1 Output Current ( $I_{O1}$ )	-10 mA ~ +10 mA
Average Output Current per Pin <sup>2</sup> Side 2 Output Current ( $I_{O2}$ )	-10 mA ~ +10 mA
Common-Mode Transients Immunity <sup>3</sup>	-200 kV/ $\mu$ s ~ +200 kV/ $\mu$ s
Storage Temperature ( $T_{ST}$ ) Range	-65°C ~ +150°C
Ambient Operating Temperature ( $T_A$ ) Range	-40°C ~ +125°C

Notes:

<sup>1</sup> $V_{DDx}$  is the side voltage power supply  $V_{DD}$ , where  $x = 1$  or  $2$ .<sup>2</sup>See Figure 6 for the maximum rated current values for various temperatures.<sup>3</sup>See Figure 18 for Common-mode transient immunity (CMTI) measurement.

Stresses at or above those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress rating only; functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Operation beyond the maximum operating conditions for extended periods may affect product reliability.

## APPLICATIONS INFORMATION

### OVERVIEW

The π1xxxxx are 2PaiSemi digital isolators product family based on 2PaiSEMI unique *iDivider*® technology. Intelligent voltage **Divider** technology (*iDivider*® technology) is a new generation digital isolator technology invented by 2PaiSEMI. It uses the principle of capacitor voltage divider to transmit signal directly cross the isolator capacitor without signal modulation and demodulation. Compare to the traditional Opto-couple technology, icoupler technology, OOK technology, *iDivider*® is a more essential and concise isolation signal transmit technology which leads to greatly simplification on circuit design and therefore significantly improves device performance, such as lower power consumption, faster speed, enhanced anti-interference ability, lower noise.

By using matured standard semiconductor CMOS technology and the innovative *iDivider*® design, these isolation components provide outstanding performance characteristics and reliability superior to alternatives such as optocoupler devices and other integrated isolators. The π1xxxxx isolator data channels are independent and are available in a variety of configurations with a withstand voltage rating of 1.5 kV rms to 5.0 kV rms and the data rate from DC up to 600Mbps (see the Ordering Guide).

The π14xExx are the outstanding 200Mbps quad-channel digital isolators with the enhanced ESD capability. the devices transmit data across an isolation barrier by layers of silicon dioxide isolation.

The devices operate with the supply voltage on either side ranging from 3.0 V to 5.5 V, offering voltage translation of 3.3 V, and 5 V logic. The π14xExx have very low propagation delay and high speed. The input/output design techniques allow logic and supply voltages over a wide range from 3.0 V to 5.5 V, offering voltage translation of 3.3 V and 5 V logic. The architecture is designed for high common-mode transient immunity and high immunity to electrical noise and magnetic interference.

See the Ordering Guide for the model numbers that have the fail-safe output state of low or high.

### PCB LAYOUT

The low-ESR ceramic bypass capacitors must be connected between  $V_{DD1}$  and GND<sub>1</sub> and between  $V_{DD2}$  and GND<sub>2</sub>. The bypass capacitors are placed on the PCB as close to the isolator device as possible. The recommended bypass capacitor value is between 0.1  $\mu$ F and 10  $\mu$ F. The user may also include resistors (50–300  $\Omega$ ) in series with the inputs and outputs if the system is excessively noisy, or in order to enhance the anti ESD ability of the system.

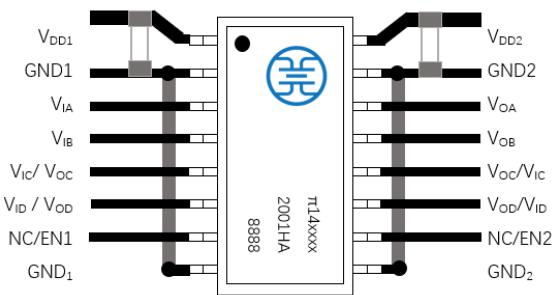

Figure 16. Recommended Printed Circuit Board Layout

Avoid reducing the isolation capability, Keep the space underneath the isolator device free from metal such as planes, pads, traces and vias.

To minimize the impedance of the signal return loop, keep the solid ground plane directly underneath the high-speed signal path, the closer the better. The return path will couple between the nearest ground plane to the signal path. Keep suitable trace width for controlled impedance transmission lines interconnect.

To reduce the rise time degradation, keep the length of input/output signal traces as short as possible, and route low inductance loop for the signal path and It's return path.

### JITTER MEASUREMENT

The eye diagram shown in the figure below provides the jitter measurement result for the π14xExx. The Keysight 81160A pulse function arbitrary generator works as the data source for the π14xExx, which generates 100Mbps pseudo random bit sequence (PRBS). The Keysight DSOS104A digital storage oscilloscope captures the π14xExx output waveform and recovers the eye diagram with the SDA tools and eye diagram analysis tools. The result shows a typical measurement jitter data.

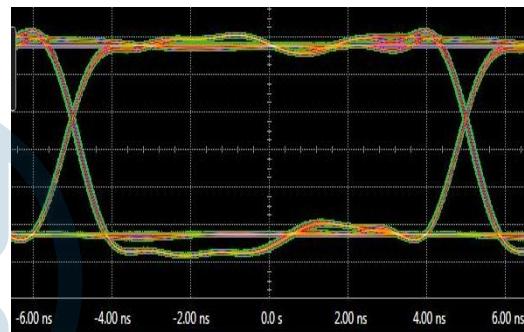

Figure 17. π14xExx Eye Diagram

### CMTI MEASUREMENT

To measure the Common-Mode Transient Immunity (CMTI) of π1xxxxx isolator under specified common-mode pulse magnitude (VCM) and specified slew rate of the common-mode pulse ( $dVCM/dt$ ) and other specified test or ambient conditions, The common-mode pulse generator (G1) will be capable of providing fast rise and fall pulses of specified magnitude and duration of the common-mode pulse (VCM),such that the maximum common-mode slew rates ( $dVCM/dt$ ) can be applied to π1xxxxx isolator coupler under measurement. The common-mode pulse is applied between one side ground GND<sub>1</sub> and the other side ground GND<sub>2</sub> of π1xxxxx isolator, and shall be capable of providing positive transients as well as negative transients.

<sup>1</sup> Pai1xxxxx is equals to π1xxxxx in the customer BOM.

<sup>2</sup> MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

<sup>3</sup> MOQ, minimum ordering quantity.

## REVISION HISTORY

Revision	Date	Page	Change Record
1.0	2018/09/17	All	Initial version
1.1	2018/11/28	P11	Changed the recommended bypass capacitor value.
1.2	2019/09/08	Page1	Changed the contact address. Add <i>iDivide</i> technology description in General Description. Changed propagation delay time, CMTI and HBM ESD. Added WB SOIC-16 Lead information.
1.3	2019/12/20	Page1,11,14	Changed description of $\pi$ 1xxx6x.
1.4	2020/02/16	Page1	Changed propagation delay time.
1.5	2020/02/25	Page5	Changed Pulse Width Distortion.
1.6	2020/03/16	Page6	Changed VDDx Undervoltage Threshold and Regulatory Information. Added information of Land Patterns and Top Marking
1.7	2020/04/16	Page12	Optimize description and format to make it consistent with the Chinese version.
1.8	2021/05/17	Page 1,5~10	Changed Regulatory Information. Added propagation delay time and supply current of $\pi$ 1xxE6x.
1.9	2021/12/06	Page 6,8,12, 17,18,19	Added Enable and Disable propagation delay time. Updated Data Throughput Range. Changed Top Marking Information. Changed MSL Peak Temp.
